

SECURITY INTELLIGENCE ADVISORY

01st August 2024 – 31st August 2024

INTENT

This report is intended to help quantify the scope of the risks as organizations struggle to balance their cyber security policies and protections against the needs of their employees for access to the Web and its resources.

BACKGROUND

Every organization, large, medium, or small, faces the significant challenge of managing vulnerabilities present in the operating systems. Unattended vulnerabilities pose a severe threat to your organization. They can expose you to various threats, including threats from users within the system, competitors seeking to gain access to sensitive information, etc. It is crucial to identify such vulnerabilities and apply updates and patches to remediate them and mitigate potential associated risks.

One effective way to stay on top of these vulnerabilities is by conducting regular vulnerability assessments. These periodic assessments cover your entire IT infrastructure and help you identify new threats that may have emerged. This proactive practice enables you to stay abreast of the current state of your security posture and helps you keep your organization safe and secure.

WHAT DOES THE VULNERABILITY ADVISORY COVER?

- We monitor around 2000 applications, appliances, and operating systems and test and verify the vulnerabilities reported in them.
- We focus on each vulnerability disclosed in these 2000 products.
- The systems and applications monitored by the Satrix Research Team are those in use in the customers' environment.
- If customers use products that aren't already being monitored by our team, they can be submitted to us, and we will initiate monitoring them the next business day. We only monitor public or commercially available solutions.
- The Vulnerability Database covers vulnerabilities that can be exploited in all types of products – software, hardware, firmware, etc.
- The vulnerabilities verified by our team are described in the client database as an Advisory and listed in the Satrix Vulnerability Reports, detailing what IT Security teams need to know to mitigate the risk posed by the vulnerability in their environment.
- The Vulnerability Database covers vulnerabilities that can be exploited in all types of products. We also cover zero days and eos/eol.
- We create daily and weekly reports covering all the details about detected vulnerabilities and the total vulnerability count in the last week and provide them to customers.
- The Satrix Advisory descriptions include severity, under investigation product, Affected Product, CVE ID, Satrix score, reference links, and remediation recommendations.
- Satrix researchers complete the vulnerability assessment process within 5 business working days.

EXECUTIVE SUMMARY

Overall Monthly Vulnerability Trend Chart

Released Vulnerabilities and Severity Count:

This graph presents threat levels based on vulnerability identified.

EXECUTIVE SUMMARY

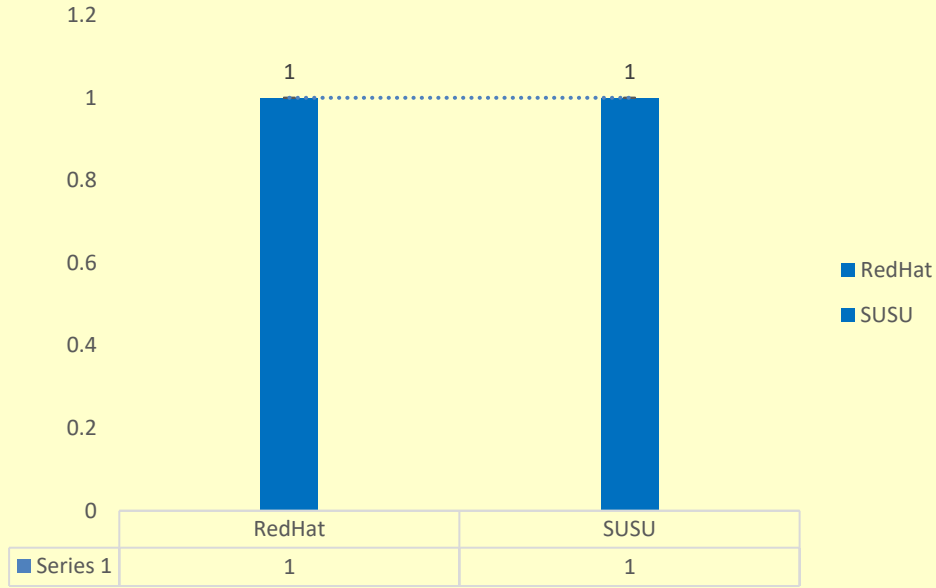

This graph presents the total vulnerabilities released, including zero-day vulnerability with their count.

Critical CVE Count: -

Product-wise Released Non-CVE ID or Zero Day Vulnerabilities Count

HIGH CVE Count: -

Date-wise Released Vulnerabilities Count, Fortnightly Summarized

Product-wise Chart for CVE

	VMWare	Microsoft	Tenable	HPE	Oracle	SUSU	Ubuntu	RedHat
Count	1	11	17	32	46	123	168	603

Count

VULNERABILITIES OF THIS MONTH

Date	Sr. #	CVE ID	Vendor	Severity	Summary	Recommendations
1-Aug	01	CVE-2023-7104 CVE-2023-45288 CVE-2023-45290 CVE-2024-24783 CVE-2024-24784 CVE-2024-24785 CVE-2024-24786	RedHat	High	Run Once Duration Override Operator for Red Hat OpenShift 1.1.1 for RHEL 9	Updates are available please see below reference link: https://support.hpe.com/hpesc/public/docDisplay?docId=hpesbnw04558en_us&docLocale=en_US
